

Save an Average of 30% on Your Hotel Fuel Bills with AERCO!

AERCO's high efficiency, condensing tankless water heaters provide an **average energy savings of 30%** more than conventional, tank storage systems. Our reliable, compact solutions deliver lower operating costs and provide unlimited, instantaneous hot water to guests of large and small hotels. And because we offer a variety of quick-to-install, cost-efficient accessories that eliminate the need for system changes to existing mechanical rooms, AERCO systems are equally well-suited for retrofits.

AERCO has three types of water heating systems (fueled by propane or natural gas) that are ideally suited for the lodging market:

Innovation

AERCO's flagship tankless water heating system is perfect for high-end and larger (> 150 rooms) hotels. To find out more about the Innovation's features and benefits, click here: [Innovation](#)

AMR

Designed to be used in smaller hotels, these high efficiency water tube heaters have a minimal amount of storage to minimize radiant losses and maximize efficiency, and therefore do not require an additional storage tank. To read more about the features and benefits of the AMR, click here: [AMR](#)

Benchmark and SmartPlate Combination System

This combination system is ideal for a hotel that uses a large centralized boiler for space heating that they'd like to combine with their water heating system. The Benchmark fire tube boilers are used for the space heating as well as the heat source for the water heating system, which is run through our SmartPlate heat exchangers as instantaneous domestic hot water heaters.
