
2. The above diagram depicts the combination heating/domestic water piping only. For gas piping and the rest of the water-side piping details, refer to appropriate Benchmark boiler installation drawings.

3. For actual sizes and locations of piping and other connections to the boiler, see appropriate Benchmark boiler dimensional drawing.

4. Refer to Smartplate Applications Guide, SP-1010, for buffer tank sizing.

6. Boiler pump must be sized to provide the appropriate flow at the design of boiler plant. Boiler pump must maintain benchmark boiler(s) required minimum flow:
   - BMK 750–1000: 12 GPM minimum flow
   - BMK 1500–3000: 25 GPM minimum flow
   - BMK 5000–6000: 75 GPM minimum flow

7. This is a typical installation drawing. Local codes and authorities should be consulted.

8. Mount the aquastat immediately downstream of buffer tank's outlet port that supplies boiler water to the Smartplate.

9. The Smartplate pump shall be operated continuously or controlled by the building automation system.
