

AERCO Venting Program

Vent Design Guarantee

With the purchase of a complete vent system built to a customer-approved AERCO design drawing, AERCO guarantees that the vented appliances will operate within the optimal outlet pressure range throughout the firing cycle. This guarantee is enforceable in the first six months after start-up and any claim that the performance is not to AERCO's requirements as judged by AERCO must be issued in writing within these six months.

AERCO guarantees the vent installation will satisfy the specified application requirements for the vent project as long as:

1. Only equipment provided by AERCO is installed on the vent run.
2. The installation conforms to the requirements of the applicable AERCO vent and combustion air guideline.
3. All AERCO equipment is properly installed, operated, and maintained in accordance with the applicable Installation, Operation and Maintenance Manual, design guides and application installation drawings. The equipment must be used for its intended purpose and put into service under normal operating conditions.
4. All information provided by the customer defining the installation and design conditions provided for the basis of design are accurate and built as specified on the customer approved AERCO vent project drawing. If the vent system purchased from AERCO meets the above criteria and the connected AERCO equipment malfunctions because of conditions caused by the design of the venting system, AERCO will take whatever steps are deemed necessary to correct the vent system issue. Said corrective action applies to material and labor charges as determined by AERCO International, Inc. AERCO reserves the right to supervise any/all aspects of the material and labor conditions and selection process.
